## Preferred Drug List

Effective 7/15/2007

### INTRODUCTION

#### Foreword

This document represents the efforts of the MedImpact Healthcare Systems Pharmacy and Therapeutics (P & T) Committee and Formulary Committee to provide physicians and pharmacists with a method to begin to evaluate the various drug products available. The medical treatment of patients is frequently relative to the practical application of drug therapy. Due to the vast availability of medication therapy and treatment modalities, a reasonable program of drug product selection and drug usage must be developed. The goal of the preferred drug list is to enhance the physician and pharmacist's abilities to provide optimal cost effective drug therapy for patients.

The development, maintenance, and improvement of this process are evolutionary and require constant attention. This is accomplished by the MedImpact P & T and Formulary Committees. The Formulary is a continually reviewed and revised list of drugs, which mirror the prevailing clinical opinion of the P & T and Formulary Committees. Unfortunately, this dynamic process does not allow this document to be completely accurate at all times. To accommodate the necessary changes of this document, updates are sent regularly. Additionally, an updated electronic version of this formulary is available online at: <http://www.medimpact.com>. As you use this Formulary, you are encouraged to review the information and provide your input and comments to the MedImpact P & T and Formulary Committees.

The MedImpact P & T and Formulary Committees use the following criteria in the evaluation of drug selection for the preferred drug list:

- Drug safety profile
- Drug efficacy
- Drug effectiveness
- Comparison of relevant drug benefits to current formulary agents of similar use, while minimizing duplications
- Equitable cost and outcomes of the total cost of drug and medical care

#### How to Use the Formulary

The Formulary is a list of covered and preferred drug agents for MedImpact members. All drugs are listed by their generic names and most common proprietary (branded) name. The Formulary may be accessed by using the index, either by generic or proprietary name (in small capital letters) and by therapeutic drug category. *The brand names listed are for reference use only, and do not denote coverage, unless specifically noted.* Any drug not found in this Formulary listing, or any Formulary updates published by MedImpact shall be considered a Non-Formulary drug.

All drugs are listed in each category in alphabetical order by generic name. Where an FDA approved generic is available for the listed generic name, the generic name is **bolded**.

For certain agents within the Formulary, a recommended prescribing guideline may apply. These are denoted throughout the document using the following symbols:

AGE	Age Edit	Coverage may depend on patient age
CU	Concurrent Use Edit	Coverage or lack thereof may depend upon concurrent use of another drug
G	Gender Edit	Coverage may depend on patient gender
MD	Physician Specialty Edit	Coverage may depend on prescribing physician's specialty or board certification
PA	Prior Authorization	Requires specific physician request process
QL	Quantity Limit	Coverage may be limited to specific quantities per prescription and/or time period
ST	Step Therapy	Coverage may depend on previous use of another drug

Please refer to the prescribing guideline appendix within this document for details regarding specific agents.

#### Benefit Coverage and Limitations

This printed Formulary does not provide information regarding the specific coverage and limitations an individual member may have. Many members have specific benefit inclusions, exclusions, copays, or a lack of coverage, which are not reflected in the Formulary.

The Formulary applies only to outpatient drugs provided to members, and does not apply to medications used in inpatient settings. If a member has any specific questions regarding their coverage, they should contact their Plan Sponsor or MedImpact at (800) 788-2949.

Depending upon a member's specific benefit parameters, the following topics may apply:

#### 1. Generic Substitution

When available, FDA approved generic drugs are to be used in all situations, regardless of the brand name indicated. The generic names are **bolded** in the formulary listing wherever an FDA approved generic drug product is available. Greater economy is realized through the use of generic equivalents. This policy is not meant to preclude or supplant any state statutes that may exist. All drugs that are or become available generically are subject to review by MedImpact's Pharmacy and Therapeutics Committee. MedImpact approves such multi-source drugs for addition to the MAC list based on the following criteria:

A multi-source drug product manufactured by at least one (1) nationally marketed company.

There must be a significant price spread between the brand and the generic drug product.

At least one (1) of the generic manufacturer's products must have an "A" rating or the generic product has been determined to be unassociated with efficacy, safety or bioequivalency concerns by the MedImpact P & T Committee.

Drug product will be approved for generic substitution by the MedImpact P & T Committee.

Certain drug products with complex pharmacokinetics, dosage forms, narrow therapeutic efficacy or where blood level maintenance is crucial will not be subject to substitution. These drug products are:

- ◆ Dilantin (except suspension)
- ◆ Neoral Oral Solution
- ◆ Premarin
- ◆ Synthroid

This list is reviewed and updated periodically based on the clinical literature and available pharmacokinetic principles of the drug products.

#### 2. Medication Request Process

Depending upon plan benefit design, a medication request process may apply as follows:

##### A. Formulary Agents

Drugs that are listed in the Formulary as Prior Authorization (PA) require evaluation, per MedImpact P & T Committee Prior Authorization guidelines prior to dispensing at a network pharmacy. Each request will be reviewed on individual patient need. If the request does not meet the guidelines established by the P & T Committee, the request will not be approved and alternative therapy may be recommended.

##### B. Non-Formulary Agents

Any drug not found in the Formulary listing, or any Formulary updates published by MedImpact, shall be considered a Non-Formulary drug. Coverage for non-formulary agents may be applied for in advance. When a member gives a prescription order for a non-formulary drug to a pharmacist, the pharmacist will evaluate the patient's drug history and contact the physician to determine if there is a legitimate medical need for a non-formulary drug. Each request will be reviewed on individual patient need. Approval will be given if a documented medical need exists. The following basic guidelines are used:

The use of Formulary Drugs is contraindicated in the patient.

The patient has failed an appropriate trial of Formulary or related agents.

The choices available in the Formulary are not suited for the present patient care need, and the drug selected is required for patient safety.

The use of a Formulary drug may provoke an underlying condition, which would be detrimental to patient care.

If the request does not meet the guidelines established by the P & T Committee, the request will not be approved and alternative therapy may be recommended.

**C. Obtaining Coverage**

Coverage, questions or information regarding the medication request or formulary process may be obtained by:

Faxing a completed **Medication Request Form** to MedImpact at (858) 790-7100.

Contacting MedImpact at (800) 788-2949 and providing all necessary information requested.

MedImpact will provide an authorization number, specific for the medical need, for all approved requests. Non-approved requests may be appealed. The prescriber must provide information to support the appeal on the basis of medical necessity. Prior Authorization is generally not available for drugs that are specifically excluded by benefit design.

**3. General Exclusions**

- A. Over the Counter (OTC) medications or their equivalents are not covered, unless otherwise specified in the Formulary listing.
- B. Drugs specifically listed as not covered are not covered.
- C. Any drug products used for cosmetic purposes are not covered.
- D. Experimental drug products, or any drug product used in an experimental manner, are not covered.
- E. Replacement of lost or stolen medication is not covered.
- F. Non self-administered injectable drug products are not covered unless otherwise specified in the Formulary listing.
- G. Foreign drugs or drugs not approved by the United States Food & Drug Administration are not covered.

The P & T and Formulary Committees recognize that not all medical needs can be met with this document and encourage inquiries about alternative therapies.

**Pharmacist and Physician Communication**

The Formulary is a tool to promote cost-effective prescription drug use. The P & T and Formulary Committees have made every attempt to create a document that meets all therapeutic needs; however, the art of medicine makes this a formidable task. MedImpact welcomes the participation of physicians, pharmacists, and ancillary medical providers, in this dynamic process. Physicians and pharmacists are highly encouraged to direct any suggestions, comments or formulary additions to MedImpact at the following address:

**Instructions:**

This form is to be used by participating physicians and providers to obtain coverage for a non-formulary drug for which there is no suitable alternative available. Please complete this form and fax to MedImpact Healthcare Systems, Inc. at (858) 790-7100 or please call (800) 788-2949 with this information. If you have any questions regarding this process, please contact MedImpact's Customer Service at (800) 788-2949.

**Review Criteria:**

The following guidelines are used in reviewing medication requests:

1. The use of Formulary Drug Products is contraindicated in the patient.
2. The patient has failed an appropriate trial of Formulary or related agents.
3. The choices available in the Formulary are not suited for the present patient care need and the drug selected is required for patient safety.
4. The use of a Formulary Drug Product may provoke an underlying medical condition, which would be detrimental to patient care.
